

Emulsion Mains PIGM 400

Repairs damaged, pigmented, dehydrated, lipid-deficient hands

Pigmented, dehydrated, lipid-deficient Skin Instants®

Affecting 90% of people over the age of 50, pigmented spots also known as age spots, with a smooth surface and limited circumference, in varying shades of brown, from a few millimetres to a few centimetres in diameter, start to appear on the backs of hands. Over the years, the pigmentation process is disrupted, the concentration of melanocytes in the basal layers of the epidermis increases, leading to the hypersecretion and poor distribution of melanin.

The lysosomes in all cells also lose their enzymatic activity and no longer degrade with age. This causes lipofuscin deposits to form from the oxidation of proteins and lipids, creating a yellowish brown pigment. At the same time, proteasome activity and the natural antioxidant system in the body to fight lipofuscin diminishes.

Lastly, the sebaceous glands and sweat glands that produce the sebum and sweat that are the basis of the hydrolipidic film limiting Insensible Water Loss (IWL), become scarcer on the hands, making them particularly sensitive to drying out. The very thin skin on this part of the body is often harshly exposed to soap, cold and sun as well as many everyday mechanical actions.

Hydration is essential for hand health as the skin there is naturally dry. A well-hydrated epidermis is immediately smooth and better armed to resist aggression that can accelerate skin aging. Also, very exposed to UV rays, hands are more prone to pigmented spots gradually appearing. It is therefore essential to prevent and reduce the appearance of existing spots while hydrating the skin on the hands to preserve their beauty.

The Biologique Recherche response:

To meet the specific problems of pigmented, dehydrated and lipid-deficient Skin Instants®, Biologique Recherche has developed Emulsion Mains PIGM 400, a cream rich in active ingredients, preventing and limiting the appearance of pigmented spots while creating a protective barrier on the skin against external aggressions.

A multipolar formula to alleviate the imbalances of dry, pigmented hands

This multi-beneficial treatment has a high content of Watercress Sprout Extract and Soy-based pure Genistin, to regulate the formation of melanin and lipofuscin and to reduce their accumulation in the skin by activating proteasomes. It reduces the pigmentation of brown spots in a targeted way, prevents photo-induced aging and evens out skin color.

Along with considerably reducing Insensible Water Loss, Pichia Anomala Extract participates in driving the skin's natural lipid-replenishment system by its boosting effect in the key steps of synthesis, transport, secretion and maturation of epidermal lipids.

Emulsion Mains PIGM 400 is thus a complete treatment. Hands are protected, smoothed and better able to face aggressions that can accelerate skin aging. The skin is also evened out and hydrated.

Actions:

- Evens out skin complexion and gives it a healthy glow
- Reduces the appearance of existing pigmented spots
- Limits new spots appearing
- Regenerates and restructures the epidermis
- Hydrates the upper layers of the epidermis

Results:

- Lightens the hands
- Reduces and limits pigmented spots
- Skin is soft and hydrated
- Skin is protected from climatic aggressions

Lightening agents: Watercress Sprout Extract and Soy-based pure Genistin.

Hydrating agents: Hyaluronic Acid and Rhizobium Complex, Biotechnological Polysaccharide.

Lipid-replenishing agents: Pichia Anomala Extract, Avocado Oil, Cumaru Oil, Cottonseed Oil, Shea Butter.

Protective agent: Rosemary Oil Extract.

Directions for use at the salon and at home:

At the salon:

Emulsion Mains PIGM 400 is ideal for hydrating hands and reducing pigmented spots on hands at the end of a treatment and can also be used for massage as part of a hand beauty treatment.

At home:

Apply Emulsion Mains PIGM 400 to hands and massage gently until completely absorbed. Use morning and night, as necessary.

Versions:

Retail version: 75ml tube

Professional version: 200ml tube
