

Crème Anti-C

Targeting the cutaneous consequences of "cellulite", the absolute prerequisite of specialized action on adipose hypertrophy

Skin Instants® with confined fat deposits

In spite of sometimes multiple endeavors to fight them, many women continue to show signs of confined fat deposits resisting the best diets.

The process of locally accumulating fat, incorrectly referred to as "cellulite", is accompanied by a series of epidermal and dermal disorders linked to the constraints of adipose hypertrophy. This multi-factor condition develops in several stages.

It starts with fat cell hypertrophy, which is followed, if fat sources are too significant to be stored, by a hyperplastic phase capable of multiplying the number of adipocytes by 10 (reaching 200 billion). The thickening of the hypodermis causes a compression in the dermis and epidermis, leading to disorganization of the dermal matrix.

It can also be the cause of blood and lymph vessel constriction, preventing the elimination of toxic residue and further aggravating damage to the dermal structure. In the most serious cases, it is accompanied by painful sensations in the nerve ends, described as "painful cellulite".

In the epidermis, thickening of the stratum corneum associated with dehydration contributes to greater architectural disruption.

All these signs are commonly called "orange peel skin".

The Biologique Recherche solution:

In order to address the specific problems of Skin Instants® with signs of confined adipose deposits, Biologique Recherche launches Crème Anti-C. This global treatment provides preliminary action against painful sensations in the tissue and their symptoms in the skin in order to better guide lipolytic active ingredients to the very heart of adipose tissue.

Beauty care with multiple and stimulating benefits

Crème Anti-C provides simultaneous action on different fronts to help repair all damage caused by "cellulite".

It starts with exfoliation of the skin, an action essential to the Biologique Recherche method. Reducing the reactional thickening of the stratum corneum helps optimize proper keratinocyte functions, a sine qua non condition for ensuring good epidermal quality.

Meanwhile, the cream's action in the dermis promotes the structural reorganization of the dermal matrix due to subtle mechanisms of dermo-epidermal exchanges of information.

At the same time, eliminated compression of blood and lymph vessels reduces "cellulite" related swelling.

Finally, hypodermal action encourages the breakdown of excess lipids and reduced adipocyte volume.

At the beauty institute, the product's creamy texture is perfect for the palpate-and-roll massage technique.

Actions:

- Adipocyte mass is reduced.
- Microcirculation is stimulated.
- Slight exfoliation helps restore a good-quality stratum corneum.

Results:

- The body shape looks more slender.
- Thigh circumference loses up to 2.5 cm in 8 weeks.
- The skin is soft to the touch, firm and well-toned.
- Cutaneous signs of "cellulite" and orange-peel skin are considerably reduced.

Lipolytic active ingredients: Complex consisting of Caffeine, Carnitine and TEA-Iodide, Jujube extract, Complex made with Essential Oils of Everlasting, Cedar, Anise and Mint.

Repairing and firming agents : Black Crowberry Juice.

Active ingredients stimulating micro-circulation: Ivy, Horsetail, Nettle and Silver Birch Bark Extracts.

Exfoliating agent: Salicylic acid.

Directions for use at home and the salon:

Salon use:

Apply to the areas requiring treatment (waist, hips, thighs and buttocks) while performing a body-contouring massage.

Home use:

Apply in the morning and evening to the areas requiring treatment using upward strokes. Then work with the Massaging Glove to boost the diffusion of active ingredients and tame resistant cellulite.

In case of pronounced and/or painful "cellulite" and in order to maximize the accumulative effect of active ingredients, a treatment of 8 weeks is recommended.

Avoid contact with eyes and mucous membranes. Do not use on pregnant women.

Versions:

Retail version: 200 ml tube

Professional version: 500 ml jar
